 CEO/President: James Espino

THE COMPANY:

Gnostech is an applied engineering and consulting company supporting the maritime industry, Department of Defense (DoD), Department of Homeland Security (DHS), and other government agencies. Gnostech offers maritime organizations a holistic and tailorable approach to secure operational systems by using state-of-the-market technologies, developing a comprehensive maintenance and sustainment program, and implementing automated solutions to eliminate vulnerabilities without disrupting maritime operations. A one size fits all cybersecurity solution is not sufficient for maritime organizations. As diverse as the maritime industry, so are Gnostech's offerings under the SafeHarbor products and services line. Gnostech is headquartered in the Philadelphia, PA metro area with an office in San Diego, CA.

THE CASE:

Cybersecurity is a growing issue for the maritime industry. Cyber threats pose significant security, safety and financial risks to shipping and offshore operations. Gnostech can safeguard both the integrity of maritime systems, assets, and facilities based on advance knowledge and expertise in the U.S. naval and maritime domains.
